

## RAISING EARNINGS FORECAST AND S&P 500 TARGET

LPL RESEARCH'S MONTHLY MARKET OUTLOOK

### Key changes from April's report:

- Upgrade view of small caps from neutral to positive and downgrade view of large caps from neutral to negative.
- Upgrade view of real estate from negative to neutral, and downgrade healthcare view from neutral to negative.

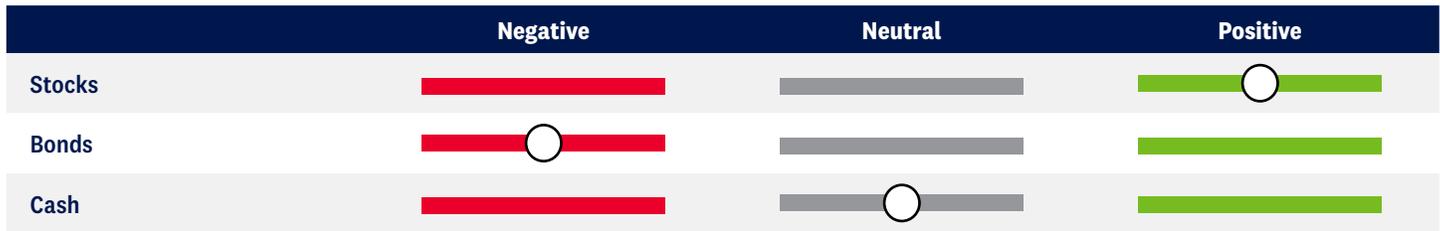

First quarter earnings season was truly remarkable, leaving us little choice but to lift our earnings forecasts just a month after our last increase. Weighing the macroeconomic and business tailwinds against the risks, we believe \$187.50—\$190 per share is a reasonable expectation for S&P 500 earnings in 2021. The favorable economic backdrop—supported by vaccine distribution, the reopening, massive stimulus, and stronger earnings growth—has enabled stocks to grow into their valuations. As a result, we have raised our 2021 year-end S&P 500 fair value target range to 4,400—4,450, which is 4% above the May 7 close at the low end of the range. Risks include COVID-19 spread outside the U.S., deficit spending, geopolitics, inflation, and tax increases. After a nearly 90% rally off the March 2020 lows, the S&P 500 may be due for a pause and more volatility is to be expected.

### INVESTMENT TAKEAWAYS

- Our equities recommendation remains overweight. We continue to favor stocks over bonds based on our expectation for a very strong economic and earnings recovery in 2021, supported by an accelerating vaccine rollout, an anticipated full reopening of the U.S. economy, and massive fiscal and monetary stimulus.
- Our favored sectors include financials, technology, and materials, offering a mix of cyclical value and growth sectors. As the economic recovery progresses in 2021, we would expect cyclical value stocks to get a boost and recommend a slight tilt in that direction for the near-term.
- We are upgrading our view of small caps to positive, supported by the early-stage bull market and economic expansion, and strong earnings rebound. Valuations appear reasonable and we believe recent underperformance creates a potentially attractive entry point.
- We continue to favor emerging markets (EM) stocks over their developed international counterparts due to a better economic growth outlook and attractive valuations, though geopolitical and regulatory threats and a shrinking economic growth advantage have left us with less conviction.
- We continue to recommend an underweight allocation to fixed income. Although we've seen a big move higher in rates this year, Fed policy and manageable inflation may limit the risk of a large rate move in the near term. Further rising rates may still put some pressure on bond returns while economic improvement may help support equities going out a full year.
- We favor a blend of high-quality intermediate bonds that is underweight U.S. Treasuries with an emphasis on short-to-intermediate maturities and sector weightings tilted toward mortgage-backed securities (MBS).

## EQUITY ASSET CLASSES

### Still Favor Emerging Markets Over Developed International, But with Less Conviction

We favor stocks over bonds in 2021 based on our expectation for a very strong economic and earnings recovery this year, supported by vaccine distribution, an anticipated full reopening of the U.S. economy, and massive fiscal and monetary stimulus. We expect the economic rebound to pick up steam as the economy more fully reopens, which may help boost performance for cyclical value stocks. We continue to favor emerging markets (EM) stocks over their developed international counterparts due to a better economic growth outlook and attractive valuations, though geopolitical and regulatory threats and a shrinking economic growth advantage have left us with less conviction.

	Sector	Overall View	Relative Trend	Rationale
Market Capitalization	Large Caps			The relatively greater financial strength enjoyed by most large cap companies helped during the pandemic. But smaller market cap companies tend to perform better early in economic expansions and during the early stages of bull markets, which has driven significant small cap outperformance since fall 2020.
	Mid Caps			Mid caps enjoy some of the early cycle characteristics of small caps, and therefore, should perform well as a more durable recovery develops. We believe mid cap stock valuations are more attractive than those of small caps in general.
	Small Caps			We are upgrading our view of small caps to positive, supported by the early-stage bull market and economic expansion, and strong earnings rebound. Valuations appear reasonable and we believe recent underperformance creates a potentially attractive entry point.
Style	Growth			We recommend a tilt toward value in equity portfolios because cyclical value may get a boost as more of the economy reopens and economic growth further accelerates. However, we believe growth stocks will continue to be bolstered by strong earnings trends and favorable positioning for the pandemic in the near term.
	Value			A durable economic recovery is emerging, which we expect to support cyclical value stocks. Value stocks remain attractively valued relative to their growth counterparts and tend to perform relatively well when economic growth accelerates. Our upgrades of financials and energy earlier this year tilted toward value. Favor cyclical value over defensive value.
Region	United States			Among developed markets, we remain U.S.-focused. We see solid gains for U.S. stocks in 2021, but the gap between U.S. and developed international stocks has started to narrow. An eventual end to the pandemic globally, better value stock performance, and a weaker dollar could close that gap further.
	Developed International			Our outlook for developed international equities remains negative, but we could potentially warm up to European equities once the pandemic is brought under control in the Eurozone, particularly if the dollar weakens. Among non-U.S. developed markets, we maintain a slight preference for Japan over Europe based on the country's massive stimulus efforts, but containing COVID-19 remains a challenge.
	Emerging Markets			We continue to favor emerging markets (EM) stocks over their developed international counterparts on a superior economic growth outlook and attractive valuations, though geopolitical and regulatory threats may lead to bouts of volatility and tariffs may remain in place.

Trend is measured by relative performance of the index for the past 12 months, minus the most recent month, compared to the other indexes in a particular sector or asset class grouping.

EQUITY SECTORS

Real Estate Starting to Make Its Move, Downgrading Healthcare

We continue to favor cyclical sectors in general for 2021 based on the early cycle stage of the economic expansion and bull market, and the improving economic growth outlook. In general, we recommend a mix of cyclical value sectors (energy, financials, and materials) that are well positioned for accelerating economic growth and rising interest rates rise, and growth sectors (communication services, consumer discretionary, and technology) which are better positioned for the pandemic. Our real estate upgrade and healthcare downgrades were driven primarily by technical analysis trends.

	Sector	Overall View	Relative Trend	S&P Wgt	Rationale
Cyclical	Materials			2.7	Strong economic growth outlooks in the United States and China and prospects for US dollar weakness underpin our positive view. Potential infrastructure package later this year may help. Strong relative performance trend.
	Energy			2.9	Demand outlook has improved and technical analysis signals remain positive, but U.S. supply overhang may limit oil price upside as production has become more profitable at higher prices.
	Industrials			8.9	A likely big beneficiary of an eventual durable U.S. economic recovery, especially if accompanied by more infrastructure spending. China exposure is a positive, though recent earnings weakness has left valuations expensive.
	Communication Services			11.1	Beneficiary of the stay-at-home environment, but the market’s rotation toward cyclical value stocks as the economy reopens is a concern and the regulatory environment may toughen. Valuations are reasonable.
	Consumer Discretionary			12.4	Historically a strong early-cycle performer. E-commerce and housing strength support our neutral view despite rich valuations. Eventual recovery in hospitality, travel, and leisure will help. Strong Q1 earnings season.
	Technology			26.2	Benefiting from work-from-home environment and powerful secular trends, as evidenced by 22% revenue growth and 40% earnings growth in Q1. Rotation toward value stocks and high valuations are risks. Negative bias.
	Financials			11.8	Prospects for accelerating economic growth, rising interest rates, a steeper yield curve, and possible further rotation into cyclical value stocks are supportive. Valuations are reasonable. Tepid loan demand a concern.
Defensive	Utilities			2.6	Valuations are reasonable and more green energy spending may help boost growth, but the market’s preference for cyclical stocks is a headwind and the sector carries interest rate risk. Favor real estate among defensives.
	Healthcare			12.9	The sector is more of a mid-to-late-cycle play, while recent underperformance suggests policy risk may be greater than expected. Longer term, growing healthcare spending and demographics may be more attractive to investors. Low valuations will eventually provide support but maybe not in 2021.
	Consumer Staples			6.0	Historically a poor relative performer early in economic cycles as a defensive sector. Rising interest rates don’t help given the sector’s attractive yields. Likely outperformer in an eventual market correction.
	Real Estate			2.5	Improving technical analysis trends lead to upgraded view. Mixed fundamentals and interest rate sensitivity suggest caution, though technology and industrial segments are strong.

Investing in real estate/REITs involves special risks such as potential illiquidity and may not be suitable for all investors. There is no assurance that the investment objectives of this program will be attained.

Because of its narrow focus, specialty sector investing, such as healthcare, financials, or energy, will be subject to greater volatility than investing more broadly across many sectors and companies.

FIXED INCOME

Limit Rate Sensitivity With Intermediate Focus

We suggest a blend of high-quality short-to-intermediate bonds in tactical portfolios. We raised our forecast for the 10-year Treasury yield last month to a range of 1.75%—2.00% as economic activity continues to impress to the upside. Compensation for longer-maturity, rate-sensitive bonds remains unattractive, in our view, supporting our positive view of MBS. We still see incremental value in corporate bonds over Treasuries, but credit spreads have little room for further tightening.

We favor **municipal bonds** as a high-quality option for taxable accounts, although valuations relative to Treasuries remain elevated. Additionally, for appropriate investors, **high yield municipal bonds** offer an attractive yield. The latest proposed stimulus package is expected to provide additional muni-related support.

		Low	Medium	High	Rationale
Positioning	Credit Quality				Credit spreads have tightened significantly, but the economic outlook may be supportive.
	Duration				Concerns over rising interest rates with the prospects of economic acceleration increase interest-rate risk.
		Neg.	Neutral	Pos.	Rationale
Sectors	US Treasuries				Yields still low but increasing and we expect yields to continue to increase from current levels. Yield spreads to international sovereigns remain attractive. Inflation breakeven rates leave TIPS fairly valued.
	MBS				Fed buying is supportive and refinancing and prepayment are slowing. MBS may provide some resilience if rates rise. Valuations are stretched so excess returns are limited.
	Investment-Grade Corporates				Risks tempered as economy improves and vaccine deployment progresses. Leverage metrics have increased, but cash levels are high. Interest-rate sensitivity has increased. Tight credit spreads limit attractiveness.
	Preferred Stocks				Higher credit quality among the riskier fixed income options. Bank fundamentals sound overall. Can be rate sensitive but may be able to tolerate gradual increases.
	High-Yield Corporates				Valuations have grown rich versus history but fundamentals remain sound. More attractive for income-oriented investors. We believe equities have more upside and high-quality options may be better diversifiers.
	Bank Loans				Economic environment supportive and better sector mix than high yield. Economic acceleration may support demand. Fewer investor protections and illiquidity of individual loans remain concerns.
	Foreign Bonds				Rich valuations, interest-rate risk, and potential currency volatility are among the negatives.
	EM Debt				Dovish central banks improve the valuation picture and stronger global growth, commodity prices, could be supportive, but spreads no longer attractive. Liquidity can be an added risk during periods of stress.

**Yield spread** is the difference between yields on differing debt instruments, calculated by deducting the yield of one instrument from another. The higher the yield spread, the greater the difference between the yields offered by each instrument. The spread can be measured between debt instruments of differing maturities, credit ratings, and risk. **Bank loans** are loans issued by below investment-grade companies for short-term funding purposes with higher yield than short-term debt and involve risk. For the purposes of this publication, **intermediate-term bonds** have maturities between 3 and 10 years, and short-term bonds are those with maturities of less than 3 years.

**All bonds** are subject to market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise and are subject to availability and change in price. **Corporate bonds** are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate, and credit risk, as well as additional risks based on the quality of issuer coupon rate, price, yield, maturity, and redemption features. Investing in **foreign and emerging market debt (EMD)** securities involves special additional risks. These risks include, but are not limited to, currency risk, geopolitical and regulatory risk, and risk associated with varying settlement standards. **High-yield/junk bonds** are not investment-grade securities, involve substantial risks, and generally should be part of the diversified portfolio of sophisticated investors. **Municipal bonds** are subject to availability, price, and market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise. Interest income may be subject to the alternative minimum tax. Federally tax-free but other state and local taxes may apply. **Mortgage-backed securities (MBS)** are subject to credit, default, prepayment risk that acts much like call risk when you get your principal back sooner than the stated maturity, extension risk, the opposite of prepayment risk, market and interest rate risk.

## COMMODITIES

### Positive Outlooks for Industrial Metals and Crude Oil

Our view of **industrial metals** is positive, reflecting the strong economic growth outlooks in both the U.S. and China. Prospects for an increase in infrastructure spending and a weaker US dollar provide additional support for the outlook. Copper's technical momentum remains strong.

Our **precious metals** view is neutral. Our December 2020 downgrade of this asset class was driven primarily by our technical analysis work that suggested less upside potential in the near term. The attractiveness of precious metals is further reduced by the improving economic outlook, although the recent stability of interest rates and potential further weakness in the US dollar are supportive.

Our **crude oil** outlook remains positive due to the improved global demand outlook as COVID-19 restrictions are removed as well as positive signals from our technical analysis work. A weaker US dollar could also provide a lift. Our primary concerns are that the U.S. supply overhang may limit further upside potential for prices and the potential for more international production as prices rise.

## ALTERNATIVE INVESTMENTS

### Favor Event Driven Strategies, but Managed Futures Becoming Increasingly Attractive

On an absolute return basis, alternative investments were unable to keep pace with the strong gains of the S&P 500 (up 5.34% during April), however, they continued to provide attractive risk-adjusted returns. Event Driven strategies, which remain our preferred alternative investment solution, gained 1.6%. The industry benefitted from stocks moving higher, as well as the three large industry tailwinds: high corporate cash balances, low borrowing rates, and private equity dry powder. Year-over-year deal flow has experienced an incredible recovery, providing active managers with a strong pipeline of deals to choose from while reducing industry concentration in specific transactions.

Outside of the Event Driven space, managed futures are becoming increasingly attractive as a result of the strong rally in commodity prices. For the past several years, a majority of the industry returns were a result of long equity positioning. While those gains are definitely beneficial, seeing strong trends in diversifying assets such as commodities provide investors a more robust and uncorrelated return profile. Long exposure in markets such as lumber, corn, and soybeans have all provided attractive returns this year. While the continuation of these trends is always uncertain, directional price movements (whether they be long or short) provide trend-following models a more attractive trading environment as compared to markets moving sideways.

**IMPORTANT DISCLOSURES**

This material has been prepared for informational purposes only, and is not intended as specific advice or recommendations for any individual. There is no assurance that the views or strategies discussed are suitable for all investors and they do not take into account the particular needs, investment objectives, tax and financial condition of any specific person. To determine which investment(s) may be appropriate for you, please consult your financial professional prior to investing. Any economic forecasts set forth may not develop as predicted and are subject to change.

Stock investing involves risk including loss of principal. Because of their narrow focus, sector investing will be subject to greater volatility than investing more broadly across many sectors and companies. Value investments can perform differently from the market as a whole and can remain undervalued by the market for long periods of time. The prices of small and mid-cap stocks are generally more volatile than large cap stocks. Bonds are subject to market and interest rate risk if sold prior to maturity.

Bond values will decline as interest rates rise and bonds are subject to availability and change in price. Corporate bonds are considered higher risk than government bonds. Municipal bonds are subject to availability and change in price. Interest income may be subject to the alternative minimum tax. Municipal bonds are federally tax-free but other state and local taxes may apply. If sold prior to maturity, capital gains tax could apply. U.S. Treasuries may be considered “safe haven” investments but do carry some degree of risk including interest rate, credit, and market risk. Bond yields are subject to change. Certain call or special redemption features may exist which could impact yield. Mortgage-backed securities are subject to credit, default, prepayment, extension, market and interest rate risk.

Credit Quality is one of the principal criteria for judging the investment quality of a bond or bond mutual fund. Credit ratings are published rankings based on detailed financial analyses by a credit bureau specifically as it relates the bond issue’s ability to meet debt obligations. The highest rating is AAA, and the lowest is D. Securities with credit ratings of BBB and above are considered investment grade. Duration is a measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. It is expressed as a number of years.

Alternative investments may not be suitable for all investors and should be considered as an investment for the risk capital portion of the investor’s portfolio. The strategies employed in the management of alternative investments may accelerate the velocity of potential losses.

Commodity-linked investments may be more volatile and less liquid than the underlying instruments or measures, and their value may be affected by the performance of the overall commodities baskets as well as weather, geopolitical events, and regulatory developments. The fast price swings in commodities and currencies will result in significant volatility in an investor’s holdings.

Investing in foreign and emerging markets securities involves special additional risks. These risks include, but are not limited to, currency risk, geopolitical risk, and risk associated with varying accounting standards. Investing in emerging markets may accentuate these risks. All information is believed to be from reliable sources; however, LPL Financial makes no representation as to its completeness or accuracy.

Earnings per share (EPS) is the portion of a company’s profit allocated to each outstanding share of common stock. EPS serves as an indicator of a company’s profitability. Earnings per share is generally considered to be the single most important variable in determining a share’s price. It is also a major component used to calculate the price-to-earnings valuation ratio.

Gross Domestic Product (GDP) is the monetary value of all the finished goods and services produced within a country’s borders in a specific time period, though GDP is usually calculated on an annual basis. It includes all of private and public consumption, government outlays, investments and exports less imports that occur within a defined territory.
