

WILL APRIL SHOWERS BRING MAY FLOWERS?

LPL RESEARCH'S MONTHLY MARKET OUTLOOK

Key changes from April report:

- No changes

Stocks resumed their downward trajectory from earlier in the year as the S&P 500 Index slipped 8.8% in April, the worst April for the index since 1970. The loss, driven primarily by inflation and Federal Reserve rate hike fears, left the equity index down 13.3% year to date as of April 29. The lack of any progress toward a peaceful resolution in Ukraine, fresh COVID-19 lockdowns in China, and an inverted 2-year/10-year Treasury yield curve added to investor nervousness.

One of the most difficult periods in history for the bond market got worse in April, as the 10-year U.S. Treasury yield spiked more than 60 basis points (0.6%) during the month and investment grade and high-yield bond credit spreads widened.

The Strategic and Tactical Asset Allocation Committee (STAAC) made no asset allocation changes for May, following what was a very active month of changes in April. Our S&P 500 Index fair value target range remains at 4,800–4,900, based on a price-to-earnings ratio (PE) of 20.5 and our 2023 earnings per share (EPS) estimate of \$235. We expect the 10-year Treasury yield to pull back to the 2.5% range by year-end, though in the near term the peak may not be in.

INVESTMENT TAKEAWAYS:

- The STAAC continues to favor stocks over bonds as it believes generally positive fundamentals outweigh pressure on valuations.
- Our value and growth style views remain neutral for now. Watch for slower economic growth, a flat yield curve, stable or falling overall interest rates, and solid earnings gains to potentially propel a growth turnaround in the second half.
- As the economic cycle matures, we would expect large caps to resume leadership, though attractive valuations and a U.S. focus may provide support for small caps in the near term.
- The STAAC suggests a modest underweight to fixed income relative to investors' respective targets, as appropriate, as higher interest rates may put additional pressure on bond returns.
- Although we've seen a meaningful move higher in yields this year, broadening inflationary pressures and the reduction of Federal Reserve (Fed) policy support may push yields still higher in the months ahead. We've increased our yearend target for the 10-year Treasury yield from 2.25% to 2.5%.
- Shorter maturity corporate credit and high yield bonds (for income-oriented investors) are starting to look more attractive.

2022 MARKET FORECASTS

LPL Research STAAC Committee Still Sees Stock Gains in 2022 on Back of Solid Earnings Growth

	Previous	Current
10-Year U.S. Treasury Yield	2.25%-2.5%*	2.25%-2.5%*
S&P 500 Index Earnings per Share	\$220	\$220
S&P 500 Index Fair Value	4,800-4,900**	4,800-4,900**

Source: LPL Research, FactSet, Bloomberg

All indexes are unmanaged and cannot be invested into directly. The economic forecasts may not develop as predicted.

*As noted in our [LPL Research blog](#) on 3/29/22, our year-end 2022 forecast for the U.S. 10-year Treasury yield is 2.25%-2.5%. The forecast reflects above-trend inflation, reduced Fed policy support, an aging demographic in need of income, higher global debt levels, and anticipated rebalancing into fixed income from equities.

**As also noted in our [Weekly Market Commentary](#) dated 3/28/22, our year-end 2022 fair-value target range for the S&P 500 of 4,800-4,900 is based on a price-to-earnings ratio (PE) of about 20.5 and our S&P 500 earnings per share (EPS) forecast of \$235 in 2023.

For investors who have their own benchmarks, we would recommend emphasizing underweights or overweights relative to the individual benchmark at the most similar overall risk level.

Equity benchmark style box allocations are based on lookthrough analysis of the domestic equity indexes used in our benchmark. While the indexes stay constant, style box allocations may drift over time.

Bond benchmark sector allocations are based on a look-through analysis of the major sector components of the Bloomberg Barclays US Aggregate Bond Index.

Treasuries include other government related debt. MBS includes other securitized debt.

Abbreviations: TAA - tactical asset allocation; MBS - mortgage-backed securities; IG corporates - investment-grade corporates; TIPS - Treasury inflation-protected securities.

Style box allocations only include domestic allocations.

EQUITY ASSET CLASSES

Maintaining Slight Overweight to Stocks

The LPL Research STAAC continues to favor stocks over bonds as still-solid fundamentals outweigh pressure on valuations due to higher interest rates. The Committee continues to expect above-trend, though slower, economic growth and continued solid earnings gains to support stock market gains in 2022, though the risk of a broader military conflict in Europe, stubbornly high inflation, and an overly aggressive Fed present sizable risks. The Committee’s views on the value and growth styles remain neutral, though slower economic growth, a flat yield curve, potentially stable or lower interest rate levels, and strong earnings gains may set the stage for a growth turnaround in the second half. Large caps may sustain leadership as the economy transitions toward late cycle, though small caps may benefit from valuation support and their U.S. focus in the near term. The greater likely economic impact of the Russia-Ukraine conflict on Europe due to the continent’s reliance on Russian energy supports the Committee’s preference for U.S. equities over developed international and emerging markets.

	Sector	Overall View	Relative Trend	Rationale
Market Capitalization	Large Caps			As the economic cycle moves toward its later stages through 2022, the environment may become more favorable for large cap companies as they have typically performed better later in economic cycles. They are better positioned to manage global supply chain disruptions than small caps but are more exposed to weakness in Europe.
	Mid Caps			As the economic cycle matures, mid caps may see less benefit from their early cycle characteristics. Mid cap stock valuations are just as attractive compared to large caps as they have been in over 20 years. Merger and acquisition environment remains fairly healthy but tightening monetary conditions are likely to slow deal activity.
	Small Caps			Small cap stock valuations have become more attractive recently, smaller companies are relatively more insulated from economic weakness in Europe than larger cap companies, and earnings estimates were revised nicely higher in April. However, small caps may struggle as the economic cycle moves toward its later stages and merger activity may have peaked for a while.
Style	Growth			Slowing economic growth, a flatter yield curve, and earnings trends are bullish for the growth style, but growth stocks are relatively expensive and are unlikely to benefit as much from the economy’s reopening or high inflation as value stocks.
	Value			A flat yield curve creates difficult economic conditions for value stocks because of the pressure on financials. However, cyclical value stocks remain attractively valued and are benefiting from easing COVID-19 pressures and the ongoing commodities boom.
Region	United States			The Russia-Ukraine conflict strengthens our conviction in favoring U.S. equities over their developed international counterparts and delays the synchronized global expansion. The U.S. economy is better positioned than Europe to withstand higher energy costs, particularly Germany which is very reliant on Russian energy.
	Developed International			Our March 2022 downgrade of international equities reflected Europe’s heavy reliance on Russian energy. Germany appears to be on the cusp of a recession. Prior to the Russian invasion of Ukraine, the outlook for Europe and Japan had begun to improve. An eventual post-pandemic, synchronized global expansion could be supportive but has been delayed.
	Emerging Markets			Neutral view is tenuous given China COVID-19 lockdowns and war in Ukraine. Stimulus in China, attractive valuations, and fewer regulatory crackdown headlines allow us to remain at neutral for now. MSCI Emerging Markets Index has roughly matched U.S. market performance since mid-March.

Relative trend is an assessment of the intermediate term price trend and performance between various asset classes and sectors. For regions and styles the relative trends are compared to each other.

EQUITY SECTORS

We Continue to Favor Defensive Sector Exposure

As the economic cycle matures and the economic expansion faces more threats, the STAAC Committee recommends if suitable a tilt toward defensive sectors, achieved last month with the decision to upgrade consumer staples, healthcare, and utilities. The moves also align with the strongest technical analysis trends. We maintain our positive healthcare and real estate views, while our negative views now include two economically sensitive sectors negatively impacted by high inflation and a slowing economy: consumer discretionary and industrials. The rest of the Committee’s sector views are neutral, though energy still looks like a good short-term hedge against potential additional disruption to Russian energy exports. Opportunities for a more positive view of technology and other growth sectors may emerge over the next several months should the macro environment become more favorable.

	Sector	Overall View	Relative Trend	S&P Wgt	Rationale
Cyclical	Materials			2.7	Slower growth in China, a strong U.S. dollar, and delayed post-pandemic pickup in global growth offset benefits of infrastructure spending, higher metal prices, and inflation. Valuations are fair, not compelling.
	Energy			4.1	Russian supply disruptions further tighten an already tight global supply picture. Ukraine resolution could bring oil prices down further, while U.S. and Mideast production will likely rise in response to higher prices. Global demand is solid.
	Industrials			8.0	Soft earnings estimate revisions and ongoing supply chain disruptions dampen the near-term outlook, though more infrastructure spending will eventually help. Much of reopening boost has likely occurred. Fair valuations. Technical analysis signals are negative.
	Communication Services			8.5	A toughening regulatory environment for this digital media-heavy sector, below-average estimated earnings growth in 2022, and weak technical analysis trends offset increasingly attractive valuations and keep us at neutral.
	Consumer Discretionary			11.8	Consumer spending outlook remains healthy, but inflation is eroding purchasing power as oil surges, relative strength has deteriorated, and the sector is historically not a strong mid-cycle performer. Valuations are high despite solid earnings gains.
	Technology			27.0	Relatively good fundamentals help offset the risk that higher interest rates further pressure growth-stock valuations or work-from-home stocks continue to struggle amid reopening. Interesting buy-the-dip candidate. Earnings estimates holding up. Fair valuations.
	Financials			11.0	Expanding economy should help boost loan demand in 2022, though yield curve flattening and weaker European economies introduce risk. Technical analysis signals and rate environment contributed to last month’s downgrade. Valuations remain attractive.
Defensive	Utilities			2.9	Technical analysis drove the April upgrade. Green-energy spending may help. Most of the interest rate move may have already occurred. It may be too early in the economic cycle for utilities to sustain outperformance. Likely laggard in market rally. Elevated valuations.
	Healthcare			14.2	Maturing economic cycle, improving technical analysis trends, and diminishing policy risk as the Build Back Better plan stalls are supportive of the sector near-term. Demographic trends offer long-term support. Valuations are relatively attractive.
	Consumer Staples			6.8	Outperformance in recent pullback was to be expected, but slow-growth staple companies are getting squeezed by higher costs and valuations are elevated. However, interest rate risk is lessened by the big rate move and technical analysis picture has improved.
	Real Estate			3.0	Benefits of reopening, the sector’s tendency to effectively manage inflation, and healthy credit markets, are supportive. Defensive sectors have been attracting more interest recently. Interest rates may be near a peak. Recent outperformer. Fair valuations.

Because of its narrow focus, specialty sector investing, such as healthcare, financials, or energy, will be subject to greater volatility than investing more broadly across many sectors and companies. Relative trend is an assessment of the intermediate term price trend and performance between various asset classes and sectors.

Relative trend is an assessment of the intermediate term price trend and performance between various asset classes and sectors. For sectors each sector’s relative trend is versus the S&P 500.

FIXED INCOME

The Value Proposition for Fixed Income Broadly has Improved

With yields moving higher recently in most fixed income markets, we believe future returns for fixed income investors may have likely improved. We're seeing increasing investment opportunities in shorter maturity securities such as short maturity investment grade corporates. Also, higher yields (and still low default expectations) for lower rated corporate credit markets make this area interesting as well. While there's no guarantee that yields can't go higher, at current levels, which are above longer-term averages in most markets, valuations for many fixed income assets are starting to look interesting again.

We favor **municipal bonds** as a high-quality option for taxable accounts and given the recent rate-driven selloff, valuations relative to Treasuries have improved. Additionally, for appropriate investors, we believe **high yield municipal bonds** offer an attractive tax-equivalent yield. Fundamentals in both markets remain solid.

		Low	Medium	High	Rationale
Positioning	Credit Quality				Yields in many credit markets exceed their longer-term averages so prospects of future returns may have improved. We think the economic outlook remains supportive as well.
	Duration				We think maintaining a slight underweight to interest-rate sensitive assets makes sense at this point in the cycle.
		Neg.	Neutral	Pos.	Rationale
Sectors	U.S. Treasuries				Yields have traded meaningfully higher recently as the market has repriced the number of expected Fed rate hikes. Volatility is likely to remain elevated though as the Fed starts to reduce Treasury reinvestments. Yield spreads to international sovereigns remain attractive but have narrowed recently. Inflation breakeven rates leave TIPS fully valued.
	MBS				The Fed has stopped new MBS purchases, and balance sheet runoff is a potential risk this year, which may put upward pressure on yields. Valuations remain full, but higher yields would likely attract additional yield buyers.
	Investment-Grade Corporates				The recent sell-off in corporate credit has impacted shorter maturity corporates disproportionately, so we think there is currently an opportunity to add to this area of the market without taking on elevated levels of interest rate or credit risk. Fundamentals remain solid.
	Preferred Stocks				Higher credit quality among the riskier fixed income options. Bank fundamentals sound overall. Can be rate sensitive but may be able to tolerate gradual increases. Valuations have improved recently.
	High-Yield Corporates				With total yields in high yield bonds above historical averages, though with arguably a higher-quality index disposition, the value proposition for high yield bonds has improved. Additionally, credit fundamentals remain sound. Volatility is likely to remain elevated though.
	Bank Loans				Economic environment is supportive and better sector mix than high yield. Higher interest rates may support demand. Fewer investor protections and illiquidity of individual loans remain concerns. While we're still constructive on bank loans, the relative value proposition favors high yield bonds, in our view.
	Foreign Bonds				Rich valuations, interest-rate risk, and potential currency volatility are among the negatives.
	EM Debt				Central banks are becoming less accommodative as inflationary pressures in emerging markets are building, which provides a headwind to prices. Valuations are relatively attractive but idiosyncratic risks remain. Liquidity can be an added risk during periods of stress.

Yield spread is the difference between yields on differing debt instruments, calculated by deducting the yield of one instrument from another. The higher the yield spread, the greater the difference between the yields offered by each instrument. The spread can be measured between debt instruments of differing maturities, credit ratings, and risk. **Bank loans** are loans issued by below investment-grade companies for short-term funding purposes with higher yield than short-term debt and involve risk. For the purposes of this publication, **intermediate-term bonds** have maturities between 3 and 10 years, and short-term bonds are those with maturities of less than 3 years.

All bonds are subject to market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise and are subject to availability and change in price. **Corporate bonds** are considered higher risk than government bonds but normally offer a higher yield and are subject to market, interest rate, and credit risk, as well as additional risks based on the quality of issuer coupon rate, price, yield, maturity, and redemption features. Investing in **foreign and emerging market debt (EMD)** securities involves special additional risks. These risks include, but are not limited to, currency risk, geopolitical and regulatory risk, and risk associated with varying settlement standards. **High-yield/junk bonds** are not investment-grade securities, involve substantial risks, and generally should be part of the diversified portfolio of sophisticated investors. **Municipal bonds** are subject to availability, price, and market and interest rate risk if sold prior to maturity. Bond values will decline as interest rates rise. Interest income may be subject to the alternative minimum tax. Federally tax-free but other state and local taxes may apply. **Mortgage-backed securities (MBS)** are subject to credit, default, prepayment risk that acts much like call risk when you get your principal back sooner than the stated maturity, extension risk, the opposite of prepayment risk, market and interest rate risk.

COMMODITIES

We Continue to Favor Industrial Metals over Precious Metals, While Oil Could Be Poised for another Run

Broadly, trends remain positive in commodities, but we are watching pullbacks for signs of a potential change in trend.

Our view of **industrial metals** remains positive, as prospects for solid but slower economic growth in the U.S. in 2022 and more infrastructure spending help offset slowing demand from China. Persistent strength in the U.S. dollar is a risk, as the greenback remains incredibly strong and is on the verge of testing a multi-year resistance point.

Our **precious metals** view is neutral, though we acknowledge the bullish technical analysis setup for gold amid heightened geopolitical threats and prefer gold to silver. Looking beyond the short term, though stubbornly high inflation may continue to be supportive, above-trend U.S. economic growth and higher interest rates present headwinds for defensive assets such as gold. We maintain our slight preference for industrial metals over their precious metal counterparts.

We are keeping our positive bias on **crude oil**, but near \$100 per barrel, there may be an opportunity for another move higher within a positive overall trend. Though we believe oil is unlikely to return to the March highs around \$130 per barrel anytime soon, we see \$115 as a key resistance level to watch. At the same time, we're also not dismissing the possibility of a breakout above that level in the short term as fighting in Ukraine continues and a ceasefire remains elusive. Meanwhile, global supply-demand balance remains tilted toward the demand side.

ALTERNATIVE INVESTMENTS

Alts Strength Continues

Alternative investment strategies continued to perform well during April as traditional equity and bond markets declined. Our preferred alternatives implementation, which now includes event-driven, market neutral, and low-beta single and multi-manager solutions, held up well against an increasingly volatile backdrop. Given the potential for continued market volatility, we believe diversifying alternative investment exposure across several low-beta allocations to be an appropriate implementation method.

While all of these strategies have their own characteristics, at their core they exhibit limited equity market and interest rate sensitivity. We believe these allocations may help protect portfolios in the current environment and act as a source of ballast during periods of high volatility. In regards to the event-driven industry, our three main tailwinds remain in place. These include high corporate cash balances, low borrowing rates, and the private equity industry's dry powder. Further diversification across multi-strategy and market neutral strategies may be used to seek additional sources of uncorrelated returns and the potential to mitigate traditional equity and bond market risks.

IMPORTANT DISCLOSURES

This material has been prepared for informational purposes only, and is not intended as specific advice or recommendations for any individual. There is no assurance that the views or strategies discussed are suitable for all investors and they do not take into account the particular needs, investment objectives, tax and financial condition of any specific person. To determine which investment(s) may be appropriate for you, please consult your financial professional prior to investing. Any economic forecasts set forth may not develop as predicted and are subject to change.

Stock investing involves risk including loss of principal. Because of their narrow focus, sector investing will be subject to greater volatility than investing more broadly across many sectors and companies. Value investments can perform differently from the market as a whole and can remain undervalued by the market for long periods of time. The prices of small and mid-cap stocks are generally more volatile than large cap stocks. Bonds are subject to market and interest rate risk if sold prior to maturity.

Bond values will decline as interest rates rise and bonds are subject to availability and change in price. Corporate bonds are considered higher risk than government bonds. Municipal bonds are subject to availability and change in price. Interest income may be subject to the alternative minimum tax. Municipal bonds are federally tax-free but other state and local taxes may apply. If sold prior to maturity, capital gains tax could apply. U.S. Treasuries may be considered “safe haven” investments but do carry some degree of risk including interest rate, credit, and market risk. Bond yields are subject to change. Certain call or special redemption features may exist which could impact yield. Mortgage-backed securities are subject to credit, default, prepayment, extension, market and interest rate risk.

Credit Quality is one of the principal criteria for judging the investment quality of a bond or bond mutual fund. Credit ratings are published rankings based on detailed financial analyses by a credit bureau specifically as it relates to the bond issue’s ability to meet debt obligations. The highest rating is AAA, and the lowest is D. Securities with credit ratings of BBB and above are considered investment grade. Duration is a measure of the sensitivity of the price (the value of principal) of a fixed-income investment to a change in interest rates. It is expressed as a number of years.

Alternative investments may not be suitable for all investors and should be considered as an investment for the risk capital portion of the investor’s portfolio. The strategies employed in the management of alternative investments may accelerate the velocity of potential losses.

Event driven strategies, such as merger arbitrage, consist of buying shares of the target company in a proposed merger and fully or partially hedging the exposure to the acquirer by shorting the stock of the acquiring company or other means. This strategy involves significant risk as events may not occur as planned and disruptions to a planned merger may result in significant loss to a hedged position.

Commodity-linked investments may be more volatile and less liquid than the underlying instruments or measures, and their value may be affected by the performance of the overall commodities baskets as well as weather, geopolitical events, and regulatory developments. The fast price swings in commodities and currencies will result in significant volatility in an investor’s holdings.

Investing in foreign and emerging markets securities involves special additional risks. These risks include, but are not limited to, currency risk, geopolitical risk, and risk associated with varying accounting standards. Investing in emerging markets may accentuate these risks. All information is believed to be from reliable sources; however, LPL Financial makes no representation as to its completeness or accuracy.

Earnings per share (EPS) is the portion of a company’s profit allocated to each outstanding share of common stock. EPS serves as an indicator of a company’s profitability. Earnings per share is generally considered to be the single most important variable in determining a share’s price. It is also a major component used to calculate the price-to-earnings valuation ratio.

Gross Domestic Product (GDP) is the monetary value of all the finished goods and services produced within a country’s borders in a specific time period, though GDP is usually calculated on an annual basis. It includes all of private and public consumption, government outlays, investments and exports less imports that occur within a defined territory.
